

# Sand Remedy™: The natural way to improve water repellent sands in gardens and lawns

**Vital Organics**

Sand Remedy™ is a mixture of natural minerals including clay, which has the ability to hold many times its own weight in water, replacing the need to use chemical wetting agents.

Sand Remedy™ is the natural choice for soil improvement and will make nutrients and moisture more available to plants. The clay

component of Sand Remedy™ bonds with sand particles, instantly improving soil structure and ensuring water and nutrients are kept where needed—in the root zone.

Organic Sand Remedy will blend and is compatible with ALL types of Sand based gardens.

#### BENEFITS OF USING SAND REMEDY™:

- ▶ Soil holds more water and fertiliser
- ▶ Works where needed—in the root zone
- ▶ Reduces leaching
- ▶ Perfect for any type of garden and plant
- ▶ Once off application
- ▶ Will not 'burn' or harm sensitive plants

#### Certified Organic

#### Vital Organics

Vital Organics is the sole distributor of Sand Remedy here in Western Australia. To find out more about this wonderful organic remedy, contact Len at Vital Organics.
